HOW TO CLOSE
YOUR CLEAR COMFORT POOL

Clear Comfort

1. To prevent algae growth, remove all organic debris by vacuuming and brushing the walls and floor.

2. Balance the pool chemistry:
   - pH: 7.2 - 7.4
   - Alkalinity: 60 - 120 ppm
   - Cyanuric Acid: 20 - 40 ppm
   - Calcium Hardness: 200 - 400 ppm

3. Shock your pool (approximately 1lb per 10,000 gallons).
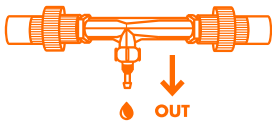

4. Run pump for 24 hours.

5. Backwash and clean filter media.

6. Turn off the breaker(s) connected to your main pool and Clear Comfort system, and ensure entire equipment pad isn't powered.

7. Remove all freeze plugs and drain water from the filter, heater, booster pumps, etc.

8. Drain above-ground pool lines including your Clear Comfort Venturi on your Manifold or bypass.

9. Adjust the water level to your climate region's recommended amount. Tip: Ask your local pool professional for the appropriate water level.

10. Recommended: Install a safety cover or leaf net and place an air pillow under it.
